

Software Requirement Specification (SRS)

1. Introduction

Purpose

Develop a Library Management Database System for managing books, members, borrowing, returns, reservations, fines, and reviews.

Scope

The system stores all library information in a centralized database and helps librarians manage daily operations efficiently.

2. Overall Description

Product Perspective

A database-driven library management application.

Product Functions

- Member Registration
- Book Management
- Borrow Books
- Return Books
- Fine Management
- Reservation
- Review System
- Report Generation

Users

- Librarian
 - Student
 - Administrator
 - College Management
-

3. Functional Requirements

FR1

System shall register new members.

FR2

System shall manage books.

FR3

System shall allow borrowing books.

FR4

System shall process returned books.

FR5

System shall calculate fines automatically.

FR6

System shall allow reservations.

FR7

System shall store book reviews.

FR8

System shall generate reports.

4. Non-Functional Requirements

- Secure
 - Reliable
 - Scalable
 - Fast
 - User-friendly
 - Maintainable
-

5. Hardware Requirements

- Intel i3 or above
- 4 GB RAM
- 100 GB Storage

6. Software Requirements

- Windows 10/11
- MySQL
- Java/Python
- VS Code or IntelliJ
- Git & GitHub
